

Planetivity - Secure Data Hosted Services

Planet Data Solutions focuses on meeting the litigation support needs of top law firms, corporations, and government authorities. We are well qualified to address your data storage goals and objectives. Planet Data provides a state of the art Data Center to provide business solutions that minimize risk and reduce costs associated with large data collections.

Planet Data's Planetivity is a Unicode compliant document review solution designed for simple and complex litigation. Planetivity is a web-based litigation document review solution. With a flexible workflow component and inherent native document viewing capabilities, our solution helps you manage your entire discovery project. Our software connects your client, counsel, contract attorneys, experts, and outside vendors in one solution. A feature-rich, online review application, Planetivity provides you with image and native file review, powerful searching, diverse coding options, strong work-flow management tools, flexible security options, and full-production capabilities, all in a highly scalable solution.

Using Planetivity you can:

- Full foreign language support through **Unicode** for major foreign languages including, Chinese, Arabic, Russian, Japanese, and Korean.
- Fully distributable architecture of all system components, allowing for a potentially infinite horizontal partitioning of the system.
- TIFF On-the-fly, which allows you to view, search, and redact documents without costly, time-consuming conversions.
- Build and track workflow processes from initial review to production.
- Connect your case data to clients, counsel, contract attorneys, experts, and vendors.
- Securely import and export data using industry-standard load file formats.
- Always access exceptional customer service from a responsive, friendly, and knowledgeable staff.

Planetivity Key Features

Simple and Clean User Interface

Planetivity is easy to use, allowing little-to-no training for novice users.

True Native Review

Planetivity preserves native document formats without having to convert to TIFF, PDF, or HTML. At any time, however, you have the option to open documents locally or convert to TIFF for redaction directly from the application. Then, within the viewer, you can navigate through search and pre-highlighted terms, and apply redactions to over 250 document formats.

Streamlined Workflow and Reporting

Planetivity can help you manage the entire review process, from initial review to production. Using Planetivity's tools, you can batch assign documents, track reviewer progress, enforce consistent tagging among duplicates and attachments, build custom validation rules, and run extensive reports.

Embedded Imaging and Production Tools

With Planetivity's embedded imaging tools, you can TIFF only the documents that you need to redact. Once you are ready to produce, let Planetivity organize and run the production. You can then easily export the final production from our system to your desktop. You can even give production access to your favorite print vendor.

Fast Searching

Planetivity allows you to run searches quickly on keyword, full-text, date-range, and other full conditional searches across the entire repository or a specific subset. You also have the option to return documents in attachment families or duplicates even if they do not match your original search query. This makes it easier to perform batch assignments and improves mass-tagging consistency.

Flexible Application Security

Planetivity employs a robust security architecture, which allows object or field security. You control user access down to the individual field. This also aids in securing sub-collections of documents, hiding fields, and exposing specific documents for expert review.

Immediate Collaboration

Planetivity is web-based allowing users the ability to access data from any internet-connected computer. Our secure access also allows external vendors to easily load and export information, eliminating the need to FTP and ship CDs from location to location.

Secure On-Demand Deployment

Planetivity On-Demand requires no additional hardware or server software to install. As soon as your account is created, you are up and running. We store your data in our state-of-the-art secure data center, which is protected by a comprehensive security system, including 128-bit SSL encryption, redundant managed firewalls, and advanced intrusion detection systems.

Exceptional Customer Service

Our support staff is a mere click or phone call away. With a personalized and solution-responsive approach, we can guide you through the document review process.

Foreign Language Support through Unicode

Major foreign languages, including Chinese, Arabic, Russian, Japanese, and Korean, are supported. All system actions, including reviewing, imaging, producing, and searching are available for documents and document metadata containing foreign languages.

Fully Distributable Architecture

The system support distribution of all its components across multiple servers allowing for potentially infinite horizontal partitioning of the system.

Hosting - Application Service Provider (ASP) Services

Planet Data Solutions cases are hosted on a Planetivity platform at the SunGard Availability Services Center located in Carlstadt, New Jersey. SunGard Availability Services is the pioneer and leading provider of Information Availability solutions helping to ensure uninterrupted access to mission-critical data and systems. SunGard enables more than 10,000 clients worldwide to keep people and information connected through customized enterprise-wide solutions that support people, process and infrastructure. Planet Data Solutions has developed a set of Best Practices with a focus on the total environment—the network, servers, applications, databases- in addition to storage. These best practices enable Planet Data Solutions to offer our customers the highest availability and quality of service, while managing the lowest possible cost of operations.
