REVIEW AND PRODUCTION SERVICES

*Planet Data Solutions focuses on meeting the litigation support needs of top law firms, corporations, and government authorities. We are well qualified to address your data storage goals and objectives. Planet Data provides a state of the art SunGuard Data Center to provide business solutions that minimize risk and reduce costs associated with large data collections.*

*Planet Data's Planetivity is a web-based, Unicode compliant document review solution designed for both simple and complex litigation. With a flexible workflow component and inherent native document viewing capabilities, Planetivity helps you to manage your entire discovery project. Planetivity connects your client, counsel, contract attorneys, experts, and outside vendors in one solution. A feature-rich, online review application, Planetivity provides you with image and native file review, powerful searching, diverse coding options, strong workflow management tools, flexible security options, and full-production capabilities, all in a highly scalable platform.*

REVIEW AND PRODUCTION SERVICES

---

**PLANETIVITY  
REVIEW AND PRODUCTION**

**Using Planetivity you can:**

- *Have full foreign language support through Unicode for major foreign languages including, Chinese, Arabic, Russian, Japanese, and Korean.*
- *Use Data Analytics - Cross Lingual Concept Searching, Culling and Categorization Tools*
- *Utilize fully distributable architecture of all system components, allowing for a potentially infinite horizontal partitioning of the system.*
- *TIFF On-the-fly, which allows you to view, search, and redact documents without costly, time-consuming conversions.*
- *Build and track workflow processes from initial review to production.*
- *Connect your case data to clients, counsel, contract attorneys, experts, and vendors.*
- *Securely import and export data using industry-standard load file formats.*
- *Always access exceptional customer service from a responsive, friendly, and knowledgeable staff.*

REVIEW AND PRODUCTION SERVICES

---

**PLANETIVITY  
KEY FEATURES**

***Simple and Clean User Interface***

*Planetivity is easy to use, allowing little-to-no training for novice users.*

***True Native Review***

*Planetivity preserves native document formats without having to convert to TIFF, PDF, or HTML. At any time, however, you have the option to open documents locally or convert to TIFF for redaction directly from the application. Then, within the viewer, you can navigate through search and pre-highlighted terms, and apply redactions to over 250 document formats.*

***Streamlined Workflow and Reporting***

*Planetivity can help you manage the entire review process, from initial review to production. Using Planetivity's tools, you can batch assign documents, track reviewer progress, enforce consistent tagging among duplicates and attachments, build custom validation rules, and run extensive reports.*

***Embedded Imaging and Production Tools***

*With Planetivity's embedded imaging tools, you can TIFF only the documents that you need to redact. Once you are ready to produce, let Planetivity organize and run the production. You can then easily export the final production from our system to your desktop. You can even give production access to your favorite print vendor.*

REVIEW AND PRODUCTION SERVICES

---

**PLANETIVITY  
KEY FEATURES**

**Fast Searching**

*Relativity allows you to run searches quickly on keyword, full-text, date-range, and other full conditional searches across the entire repository or a specific subset. You also have the option to return documents in attachment families or duplicates even if they do not match your original search query. This makes it easier to perform batch assignments and improves mass-tagging consistency.*

**Flexible Application Security**

*Relativity employs a robust security architecture, which allows object or field security. You control user access down to the individual field. This also aids in securing sub-collections of documents, hiding fields, and exposing specific documents for expert review.*

**Immediate Collaboration**

*Relativity is web-based allowing users the ability to access data from any internet-connected computer. Our secure access also allows external vendors to easily load and export information, eliminating the need to FTP and ship CDs from location to location.*

**Secure On-Demand Deployment**

*Relativity On-Demand requires no additional hardware or server software to install. As soon as your account is created, you are up and running. We store your data in our state-of-the-art secure data center, which is protected by a comprehensive security system, including 128-bit SSL encryption, redundant managed firewalls, and advanced intrusion detection systems.*

---

**PLANETIVITY  
KEY FEATURES**

**Exceptional Customer Service**

*Our support staff is a mere click or phone call away. With a personalized and solution-responsive approach, we can guide you through the document review process.*

**Foreign Language Support through Unicode**

*Major foreign languages, including Chinese, Arabic, Russian, Japanese, and Korean, are supported. All system actions, including reviewing, imaging, producing, and searching are available for documents and document metadata containing foreign languages.*

**Hosting - Application Service Provider (ASP) Services**

*Planet Data Solutions cases are hosted on a Relativity platform at the SunGard Availability Services Center located in Carlstadt, New Jersey. SunGard Availability Services is the pioneer and leading provider of Information Availability solutions helping to ensure uninterrupted access to mission-critical data and systems. SunGard enables more than 10,000 clients worldwide to keep people and information connected through customized enterprise-wide solutions that support people, process and infrastructure. Planet Data Solutions has developed a set of Best Practices with a focus on the total environment-the network, servers, applications, databases- in addition to storage. These best practices enable Planet Data Solutions to offer our customers the highest availability and quality of service, while managing the lowest possible cost of operations.*

REVIEW AND PRODUCTION SERVICES

---

**PLANETIVITY  
ANALYTICS FEATURES**

*Relativity, the innovative web-based litigation support platform, incorporates ground-breaking conceptual search technology. This search technology enables Relativity's Analytics feature set.*

**What is Conceptual Search Technology?**

Unlike traditional keyword search engines, conceptual searching is based on how and where ideas and concepts intercept with similar ideas and concepts in a document collection. This is mathematically based - there are no word lists or dictionaries, or linguistic techniques (like sentence structures). The technology is self-training, "learning" all it requires from material being processed. Not only can it identify, classify, and sort information rapidly, it will also find relevant documents that other techniques routinely miss.

**Conceptual Search**

**Feature:** Run searches based on how and where ideas and concepts intercept with similar ideas and concepts in a document collection. Enter blocks of relevant text or the contents of entire documents as search criteria.

**Benefits:** Find more of the relevant documents and less junk. Do it faster and more accurately than by constructing multiple elaborate keyword searches. Avoid the pitfalls of OCR errors affecting search results.

**Integrated Keyword and Conceptual Search**

**Feature:** Combine keywords and concepts in one integrated search.

**Benefits:** Eliminate the issue of a single keyword having multiple meanings. Find the documents you intend the search to return and avoid false positive hits.

REVIEW AND PRODUCTION SERVICES

---

**PLANETIVITY  
ANALYTICS FEATURES**

***Integrated Advanced Search***

**Feature:** Combine conceptual and keyword searches with conditional filters applied to specific fields in the database: metadata, bibliographical data, reviewer comments, tags, etc.

**Benefits:** Provide the power to search structured data and unstructured data in a single search. Gives you the ultimate in control to find exactly what you want.

***Integrated Document Viewer Search***

**Feature:** Utilize conceptual searching within Relativity's innovative Document Viewer by right-clicking on a displayed document. Submit relevant blocks of text or whole documents as a search while viewing the document.

**Benefits:** Find relevant documents quickly and easily without having to construct a search string, or move to another section of the review application and develop search criteria.

***Conceptual Keyword Expansion***

**Feature:** Select keywords within the Document Viewer, and have Relativity produce a list of conceptually related terms in a popup window.

**Benefits:** Assess and evaluate your client's document collection and proposed keyword lists early.

Understand important concepts in opposing counsel's document production. Identify commonly used aliases and e-mail handles. Quickly understand how one keyword relates to all of the documents in the collection.

REVIEW AND PRODUCTION SERVICES

---

**PLANETIVITY  
ANALYTICS FEATURES**

**Categorization**

**Feature:** Use the power of the conceptual search engine to cluster and organize documents in the entire database based on a small set of user examples.

**Benefits:** Prioritize your review queue. Perform automated quality control of issue and privilege coding before depositions, productions, or trial.

**Multiple Conceptual Indexes**

**Feature:** Create searchable or categorization indexes on-the-fly inside of Relativity.

**Benefits:** Fine tune indexes and make adjustments for your review team based on the changing needs of the case and new information learned from the documents. Interact dynamically with the document collection.

**Similar Document Detection**

**Feature:** Quickly identify and group documents that have virtually the same content. This can be done "on-the-fly" through a right-click in Relativity's innovative Document Viewer, or in a batch process to identify similar document sets for review.

**Benefits:** Significantly reduce the number of documents to review. Employ Relativity's unique propagation rules to ensure consistent coding across similar documents. Improve accuracy and eliminate time wasted by the re-review of inconsistently tagged documents.
